Meta Cloud API & WhatsApp Business Platform Setup Manual

Enterprise Autonomous Sourcing Agent Client Registration Guide | Version 2.4

1. Executive Overview

This manual details the step-by-step registration workflow required to deploy the Autonomous Procurement Agent on the **Meta for Developers (WhatsApp Cloud API)** platform. Once configured, the agent communicates directly with wholesale nursery and product suppliers via WhatsApp, negotiating prices, enforcing margin disciplines, and closing purchase orders autonomously.

2. Onboarding Prerequisites

Component	Specification & Purpose
Meta Developer Account	Active administrator account at *developers.facebook.com*
Meta Business Account	Verified Business Manager account for production messaging access
Dedicated Phone Number	Clean SIM / number not active on personal or mobile WhatsApp Business app
Server Webhook URL	HTTPS endpoint: https://<domain>/api/inventory-agent/webhook

3. Step-by-Step Meta App Registration

Step 1: Create Meta Developer App

- Log in to **developers.facebook.com/apps** and click **Create App**.
- Select App Type: **Other** → Click Next → Select **Business**.
- Name the App (e.g. *Merlot AutoProcure Agent*) and link your Meta Business Account.

Step 2: Add & Configure WhatsApp Product

- In the App Dashboard, locate **WhatsApp** and click **Set up**.
- Navigate to **WhatsApp** → **API Setup** from the left navigation tree.
- Copy the **Phone number ID** and **WhatsApp Business Account ID (WABA ID)**.

Step 3: Generate Permanent System User Access Token

(Temporary 24-hour test tokens expire daily. Production requires a permanent system token):

- Go to **business.facebook.com/settings** → **Users** → **System Users**.
- Add a System User with role **Admin**.
- Click **Add Assets** → Select your Agent App → Toggle **Full Control**.
- Click **Generate New Token** → Select scopes: whatsapp_business_messaging and whatsapp_business_management.
- Copy and store the resulting token (starts with EAA...).

Step 4: Configure Webhook Callback

- Navigate to **WhatsApp** → **Configuration** → click **Edit** under Webhook.
- **Callback URL**: https://<domain>/api/inventory-agent/webhook
- **Verify Token**: merlot_secure_webhook_token_2026 (configured in .env)
- Click **Verify and Save** → under Webhook Fields click **Manage** → Subscribe to **messages**.

4. Initializing a Fresh Client Profile

To clear all prior demonstration artifacts and onboard a new enterprise client from scratch:
1. Open the cockpit dashboard at **http://localhost:5001/**.
2. Click the top-left **Store Profile** badge → click **Reset Profile to Clean Slate**.
3. Enter the client's store credentials: Legal Firm Name, Address, GSTIN, and Corporate UPI VPA.
4. Click **Save Store & UPI Registration**.
5. Click **Reset History** in the dashboard header to flush previous chat ledgers and test purchase orders.

5. POS Bridge Integration Readiness

The direct POS SQLite bridge is fully architected and ready to attach to your live inventory catalog. Per strict operational protocol, **POS live synchronization is maintained on standby** until your explicit go-ahead instruction.
